## A CLOUD-BASED COURSE MANAGEMENT PLATFORM THAT PROVIDES EFFICIENCIES TO AGENCIES THAT USE IT AND HELP TO THOSE WHO NEED IT.

Advent eLearning's main objective is to deliver convenient, self-directed education for use by individuals who want to show they have taken the initiative to correct the behaviors responsible for trouble in their lives. Whether signed up by an agency or self-enrolled, students are presented with a wide variety of evidence-based, online education programs that identify the root causes of their problems and map techniques that can help correct behavior. The positive preventive experience can give offenders a new beginning to a better, more socially-responsible life. This can also help avoid incarceration, keeping them from being confined with, and therefore influenced by, more hardened criminals.

Additionally, Advent eLearning's powerful administrative tools provide agencies an efficient platform to monitor progress, create reports, and fully manage participants. Assigning agencies are able to enroll individuals directly in a course or combination of courses or to allow individuals to self-enroll to illustrate accountability. Using Advent's unique Course Link, assigning agencies can text a registration link directly to those who qualify, making it even easier for students to enroll.

eLearning also gives the assigning agency the ability to track and monitor community service, probation, auto insurance and restitution electronically, rather than continuing to deal with an archaic, inefficient, easily manipulated paper-trail. Beneficiaries can be set up to ensure compliance by the offender and provide feedback electronically. eLearning also offers an audit trail of cases and reporting to measure the success of each program, streamlining administrative functions so agency personnel can concentrate on their primary responsibility of accountability and changing behavior.
